

Allocation and management of resources

ITU performs effective allocation of bands of the radio-frequency spectrum, the allotment of radio frequencies and the registration of radio-frequency assignments and, for space services, of any associated orbital position in the geostationary satellite orbit or of any associated characteristics of satellites in other orbits.

At the same time, ITU coordinates efforts to prevent and eliminate harmful interference between radio stations of different countries and to improve the use of spectrum and satellite orbits by radiocommunication services.

ITU also ensures the effective allocation and management of international telecommunication numbering, naming, addressing and identification resources in accordance with ITU recommendations and procedures.
